Who, why and what Jam Agenda Cloud Pak for Business Automation

Who, Why, What

- Who are we?
 - Automation Elite (SWAT)
 - World-wide team
 - Part of product team
 - Cover all of CP4BA
- Who's this Jam for?
 - Foundation audience
 - Solution implementors
 - Administrators/DevOps

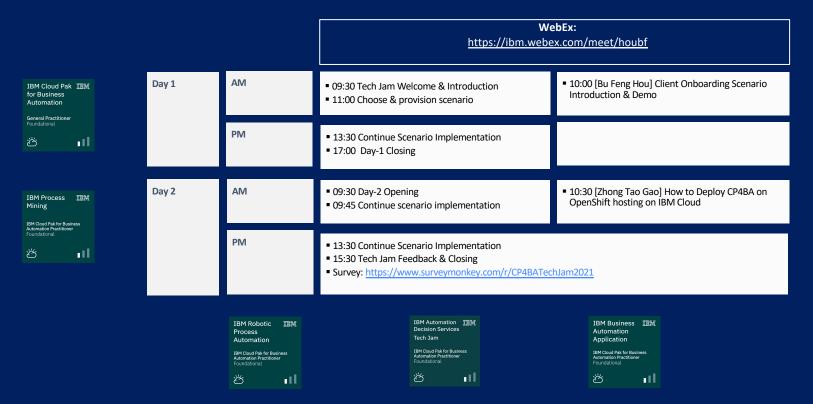

- Learn & enable
- Share experiences
- Get connected

- Hear-out the CP4BA strategy
- Experience CP4BA hands-on

Jam Agenda Cloud Pak for Business Automation

Jam Agenda – GCG

Jam Agenda Logistics Cloud Pak for Business Automation

Logistics

Dates GCG: Thursday Sept 16 to Friday Sept 17 [9:30am - 5:00pm GMT+8:00h] Logistics **Participants Technical Team** Hosts: Participants: 75 **APAC** - APAC: Bu Feng Hou, Zhong Tao Gao, Ke GMT+8:00h Feng Shao Zhong Tao Gao(CP4BA, BAA, Process Mining) ■ Ke Feng Shao(Content, Workflow, BAI/BPC) WebEx: Bu Feng Hou(CP4BA, RPA, Process Mining) https://ibm.webex.com/join/houbf -APAC: • Instructions: Bring your own laptop • (optional) Tablet / secondary screen Material - GitHub Communication - Slack: • One #cp4ba-tech-jam-main-lobby and several per topic channels #cp4ba-tech-jam-• One stop for all material accessible across IBM XXXX created https://github.com/IBM/cp4ba-tech-jam • Should have received an email from **Slack** titled: Tom Al-Hamwy has invited you to join a Slack workspace • Follow the instructions in the email to register & gain access to the slack channels

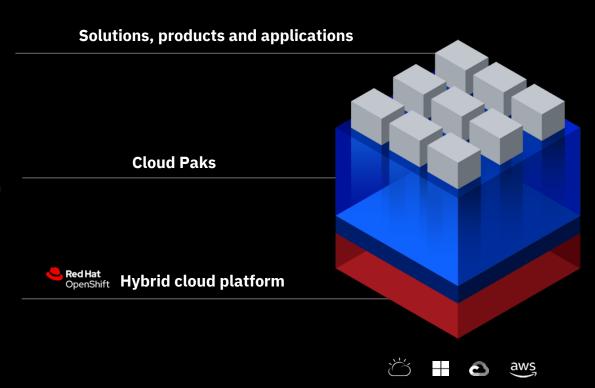

Jam Agenda Cloud Pak for Business Automation

The IBM hybrid cloud software approach

Deliver software for specific use cases or personas in Cloud Paks or cloud standalone

Unify and simplify software experiences with seamless integration of related capabilities

Enable software to run anywhere, on any cloud, as agile cloudnative services

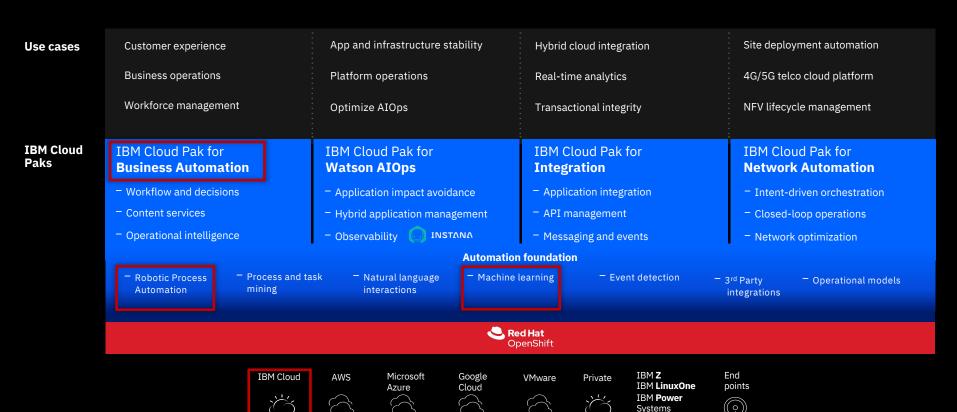

Watson

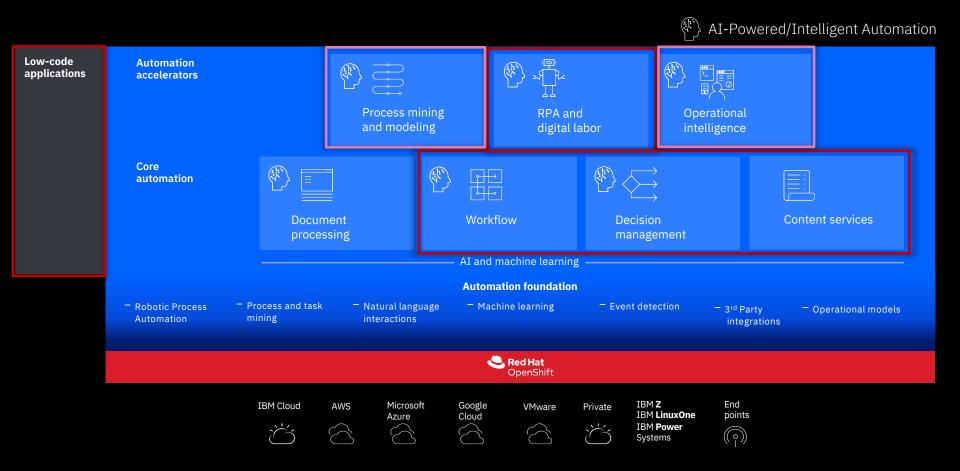

Infuse AI for business throughout our software

IBM Automation platform

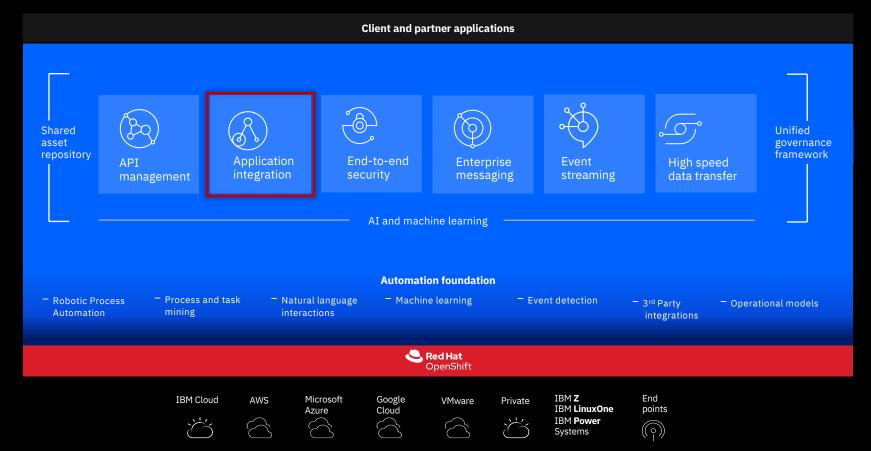

The most complete set of business and IT Automation services, powered by AI

IBM Cloud Pak for Business Automation

IBM Cloud Pak for Integration

Jam Agenda Cloud Pak for Business Automation Scenario

Intelligent Client Onboarding Scenario – Introduction IBM Automation platform

- Client Onboarding solution as part of Focus Corp's business as a service provider
- Focus Corp offers various services for different industries
- Showcases a combination of capabilities from the IBM Automation platform to digitize all aspects of the business
- Assets are used for enablement (Tech Jams), POCs, testing, sales and customer demos
- Features
 - A fully automated use-case and one requiring a knowledge worker
 - Usage of AI-Powered and Intelligent Automation

Tracks

Different tracks to cater for different target groups and previous levels of exposure to Cloud Pack for Business Automation

Track 1 – Foundation

Audience: New to Cloud Pak for Business Automation (CP4BA)

Learning: Overview of the Cloud Pak from user perspective

Approach: Guided walk-through through solution capabilities

Track 2 - Developer Role / Solution Implementation

Audience: Base understanding of Cloud Pak for Business Automation (CP4BA)

Learning: Overview of the Cloud Pak from developer and partly user perspective

Ability to develop pieces of the solution areas

Approach: Detailed lab instructions to build respective solution aspects

(Track 3 – Administrator Role)

Audience: Base understanding of Cloud Pak for Business Automation (CP4BA)

Learning: Overview of the Cloud Pak from administrator/DevOps engineer perspective

Ability to install and configure components of CP4BA

Approach: Guided instructions to install and configure CP4BA

Labs

- End-to-End (end-user view)
- Business Automation Application
- Business Automation Insights
- Decisions
- FileNet Content Services
- Process Mining
- Robotic Process Automation
- Workflow

Business Automation Application [2 hrs.]

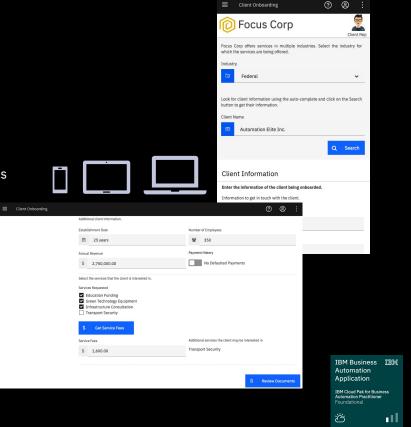

Abstract

- · Low-code capability
- Create a client onboarding application

Objective

- Learn how to create apps using the Application Designer
- Leverage services built by developers in other parts of the platform such as Workflow, Decisions & Content.

- · Automation Services
- Low-code tooling
- · Basic vs Advanced view mode
- · Building and creating UIs using views
- Responsive applications

Business Automation Insights (BPC) [1 hour]

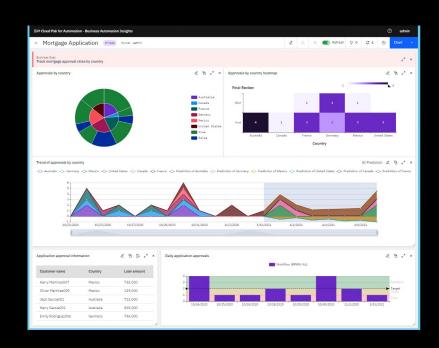

Abstract

In this lab exercise you will use Business Performance Center as part
of Business Automation Insights to create a business dashboard that
will enable a business user to get a real time business insight into
mortgage processing.

Objective

 The objective of this lab exercise is to enable you to build business dashboards using the data in BAI emitted by CP4BA runtimes such as ADS, Workflow, or Content.

- · Dashboard creation and management
- Chart creation and configuration
- Adding charts to dashboards
- · Creation and configuration of chart-based business alerts
- · Organizing charts in dashboards using business goals

Decisions (Automation Decision Services) [3 hrs.]

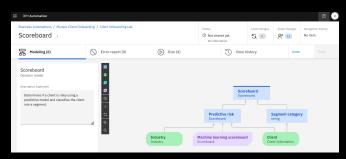

Abstract

- Create and manage business decisions based on client onboarding solution data
- Infuse intelligence by adding a predictive model into a decision service
- Connect a decision service to a GitHub repository

Objective

- Understand the key concepts of Automation Decision Services
- · Learn how to model business decisions and validate them
- Leverage AI in a decision by creating a predictive model connected to the Machine learning deployment
- Learn how to collaborate on your decision services

- Decision automations project
- Decision Designer to model, author and validate decisions
- · Machine learning model invocation from decision model
- Deployment in Decision Designer

End-to-End [2 hrs.]

Abstract

• Execute an intelligent client onboarding scenario that uses multiple capabilities of IBM Cloud Pak for Business Automation

Objective

• Learn the art of the possible for the platform

- Low-code applications
- Orchestrate tasks using Workflow
- · Store documents using Content
- · Get structured data from documents using Capture
- Use intelligent business rules using Decisions
- Automate manual tasks using Robotic Process Automation

FileNet Content Services [6 hrs.]

Abstract

- Content Platform Engine (CPE) is configured for Storing and Maintaining documents for supporting an application
- Review Configuration and Usage of new features of the products

Objective

- Learn about core concepts and features like Document Classes and Properties, Security, Storage Areas
- Explore the Graph QL interface and Content Based Retrieval

- Defining Document Properties and Class hierarchy for an application
- Configure Security settings through direct and default instance security
- · Apply Security changes to multiple documents through Bulk Actions
- Reassign documents to different storage areas / storage policies
- Configure Event Subscriptions
- Test integration with Content Search Services

Process Mining [3 hrs.]

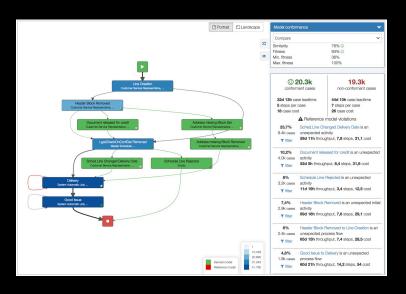

Abstract

 Explore and master the power of IBM Process Mining and learn how to apply it to real business scenarios

Objective

- Master the basics and some of the key advanced Process Mining features
- Learn how to use Process Mining to identify business improvement and automation opportunities

- Creation of new project form CSV data sets
- Using Process views to discover process bottlenecks, rework, top 5 variants, non-conformant activities
- Using Filters to drill down into process data and perform root cause analysis
- Using Business Dashboards and Analytics to track KPI violations and identify automation candidates
- Use simulations to discovery automation ROI
- Learn how use IBM Process Mining to simulate IBM Blueworks Live processes

Robotic Process Automation [3.5 hrs.]

Abstract

You will use IBM RPA Studio to develop a bot script to automate a Java swing application called Client Management System
and a web application called Services Management System. Next you will implement a Workflow Process to invoke this bot to
add client information and information about the services they signed up to to those two applications. Finally, you will use IBM
RPA Studio to develop a chatbot to allow the client to manage some of the client information through themselves.

Objective

- Gain basic knowledge of the IBM RPA offering
- Learn how to use IBM RPA Studio to develop and debug bot scripts
- Learn how to use the Recorder to automate a Java Swing Application
- Learn how to automate a web application
- Learn how to invoke a bot script from a Workflow process using the IBM RPA REST API
- Learn how to use IBM RPA Studio to develop a chatbot and expose it externally through a chat mapping configuration

- IBM RPA Studio
- Recorder
- IBM RPA REST API
- BAW integration with IBM RPA
- Chatbot

Workflow [5 hrs.]

Abstract

- Combination of Case and Process capabilities into a unified Workflow offering
- Create a client onboarding solution that contains different activities

Objective

- · Understand the basics of Workflow
- · Learn how Case and Process integrate together
- Build UIs for human services
- Leverage services from other capabilities in the platform
- Publish services built in Workflow to the platform

- Case & Process integration using toolkit views and JavaScript API
- UI creation using Coaches and Client-side human services
- · Case Builder, Process Designer & Case Client
- Automation Services
- External Services

Intelligent Client Onboarding Scenario – Summary IBM Automation Platform

- Client Onboarding solution showcases a combination of capabilities from the IBM Automation platform
- The end-to-end solution digitizes all aspects of the business freeing up knowledge workers
- Highlights how using AI for automation can improve efficiency without losing control
- Scenario will be expanded to include additional capabilities
- IBM Cloud Paks can further add value:
 - Cloud Pak for Data to add more AI capabilities
 - Cloud Pak for AIOps & Security to operate and secure the solution
